## **CONSERVATION FACILITIES AVAILABLE IN THE INSTITUTION.**

Our Institution is located in Timmapurpet area of Raichur. The College depends mainly on ground water and also has supply of city municipal water for all its water needs. Hence, efficient usage of available water and adaptation of “water conservation measures are essential. The daily requirement of water in our college is approximately .....liters. So it's our prime duty motto was tea single drop of water and start conserving the same in LVD campus for ourselves and to meet the needs of our campus.

### **Water conservation method:**

#### **I. RAIN WATER HARVESTING:**

During rainy season, run off water from roof tops, gardens, quadrangle, play grounds, roads, Open grounds. etc. is harvested and collected efficiently in the campus.

#### **Rain water is collected in rain harvesting pit.**

We have installed the RWH system. It is a very simple method used for the collection and storage of rain water which usually runs off from different locations in the campus. With the help of artificially designed systems the rain water is collected from various sources and is directed to a deep pit of the size 8ft diameter and 12ft depth so that it seeps down and restores the ground water. The pit capacity is approximately 17, 080 liters.

The rain water harvesting system is one of the best methods adopted in our institute and a major step towards conservation of water. Scarcity of good quality water is a significant cause of concern in the present day. However, Rain water, Which is of good quality, issued for watering the plants in gardens of the institute. We adapted this method to get benefits like,

- It is low cost method.
- The demand for fresh water is less.
- This method promotes water conservation and reduces soil erosion.
- It improves the quality and quantity of ground water.
- This teleology is easy to installed relatively simple.

## Construction of tanks and bunds
